INSIDE THIS ISSUE:

Special District Election Canceled

Election Canceled

Meet our newest
team members

Helpful Hints

Memorial Day
May 30th
(Closed)

Board of Directors:

Carl Christian
President

Charles Durbin
Vice President

Larry Holtz
Treasurer

Phil Thomas
Director

Dan Blankenship
Director

The May 2nd Fountain Sanitation District Election has been canceled. We had three positions open and three candidates submitted their nominations by the deadline. Congratulations to our incumbents, Carl Christian, Phil Thomas and Dan Blankenship. The following individuals make up our Board: President Carl Christian, Vice President Charles Durbin, Treasurer -Larry Holtz, Director Phil Thomas and Director Dan Blankenship.

Board Meetings are held
every Wednesday of the
month at 5:30 p.m. The
public is always welcome

Tours of the Treatment Plants
are available upon request.

Call us first! If you believe you are experiencing a sewer backup, call us at **719.382.5303** and District personnel will respond free of charge to investigate. The District will determine if the blockage is in the service line (connection from the house to the main sewer line in the street) and if necessary recommend a professional plumber to clear the blockage.

Meet our newest members of the Team:

Mark has been with the District since 2022. He was born in Michigan but has been a Colorado resident most of his life. He has two older brothers. When he is not working, Mark enjoys collecting things and playing video games. Welcome Mark!

Mark McConnaughey

Parrish Jackson

Parrish has been with the District since 2022. He was born in Japan and has been in Colorado for the last 12 years. He has two brothers and two sisters. When he is not working he enjoys playing guitar, building computers, working on cars, cooking, painting, and going to the shooting range. Welcome Parrish!

Helpful Hint:

Occasionally a homeowner will notice an odor coming from the vicinity of the plumbing fixtures in the home. Most of the time, this is caused by a "dry trap". If a fixture such as a shower or any sink drain becomes dry, it allows sewer odors to come back into the home. The solution is to run water into the drains allowing the traps to fill with water. If this doesn't solve the problem, please call us at 382-5303.

Know what's below.

No matter the type of project – installing a mailbox, putting in a fence, planting trees or shrubbery, building a patio or deck, or excavating a new garden area – always call 811! The service is free and it's the law. Calling 811 a few days prior to digging gives representatives time to mark the appropriate utility lines prior to starting your project, which keeps you and your neighbors safe.

Interesting Fact:

Humans spend three years of their life time sitting on the toilet

Our Mission:

To protect the environment and public health while providing reliable, environmentally sound and cost effective wastewater and conveyance and treatment; to be responsive to the needs of the entire FSD service area, ensuring quality and protection of our water resources for future generation's enjoyment.

****URGENT REMINDER****

Keeping the District's sanitary sewer systems flowing is critical during the coronavirus outbreak. The District is asking the community members not to flush wipes, masks or paper towels. Doing so can contribute to sanitary main line blockages including so called "fatbergs". Please keep in mind that products advertising "flushable" are normally not unless they meet a certain regulatory criteria. Should you have any questions on whether a product is made for flushing, please contact the District. Please consider what you flush to keep our community and the District employees safe during these uncertain times.

STICK TO THE 3 Ps

Only three things go in your toilet: pee, poo and (toilet) paper!
If you really want to use wipes, throw them in the garbage, not your toilet.

Contain, don't drain.

Fats, oils and greases aren't just bad for your arteries and your waistline; they're bad for sewers, too! Sewer overflows and back ups can cause health hazards, damage home interiors, and threaten the environment.

A common cause of overflows is sewer pipes clogged by fats, oils and greases (FOG). FOG gets into the sewer from household drains as well as from poorly maintained grease traps/interceptors in restaurants, automotive industries, and other businesses. Home garbage disposals do not keep grease out of the plumbing system.

To help prevent expensive sewer back ups, plumbing emergencies and public health issues, FSD is asking its customers to follow this list of **DO's** and **DON'Ts**:

DO: Scrape food scraps into the trash, not the sink.

DO: Wipe grease from pots, pans and dishes with dry paper towel before rinsing or washing them.

DO: Use strainers in sink drains to prevent food scraps from entering the sewer system.

DON'T: Put greasy food into the garbage disposal.

DON'T: Use hot water to rinse FOG from the dishes and pots and pans. As the water cools, the FOG will solidify and clog your pipes.

DON'T: Rely on commercial additives in detergents

REMINDER!

Please be reminded to call the District offices at 382-5303 prior to having a contractor clean your service line. This will allow the District time to trap any debris which may fall into the main line potentially causing a blockage. There is no cost to the homeowner for this service. The District is not responsible for wastewater backup damage and suggests you check your homeowner's policy for this specific type of coverage.

Please **"watch what you flush"**. Heavy duty industrial wipes, rags, diapers and other like items may go down the toilet fine but are not bio-degradable. These materials often cause failure of pumping equipment and have greater potential of causing a sewer blockage. Please dispose of the materials properly, not in the wastewater system.
